

Polymers

Question Paper 7

Level	IGCSE
Subject	Chemistry
ExamBoard	CIE
Topic	Organic Chemistry
Sub-Topic	
Paper	(Extended) Theory
Booklet	Question Paper 7

TimeAllowed: 83 minutes

Score: / 69

Percentage: /100

1 The hydrolysis of complex carbohydrates to simple sugars is catalysed by enzymes called carbohydrases and also by dilute acids.

(a) (i) They are both catalysts. How do enzymes differ from catalysts such as dilute acids?

..... [1]

(ii) Explain why ethanol, C_2H_6O , is not a carbohydrate but glucose, $C_6H_{12}O_6$, is a carbohydrate.

.....
..... [2]

(b) Draw the structure of a complex carbohydrate, such as starch. The formula of a simple sugar can be represented by $HO-\square-OH$.

(c) Iodine reacts with starch to form a deep blue colour.

(i) In the experiment illustrated below, samples are removed at intervals and tested with iodine in potassium iodide solution.

Typical results of this experiment are shown in the table.

time/min	colour of sample tested with iodine in potassium iodide solution
0	deep blue
10	pale blue
30	colourless

Explain these results.

.....
.....
..... [3]

(ii) If the experiment was repeated at a higher temperature, 60 °C, all the samples stayed blue. Suggest an explanation.

..... [1]

[Total: 10]

(c) When lactic acid is heated, acrylic acid is formed.

lactic acid

acrylic acid

(i) Complete the word equation for the action of heat on lactic acid.

lactic acid → + [1]

(ii) Describe a test that would distinguish between lactic acid and acrylic acid.

test

result for lactic acid

result for acrylic acid [3]

(iii) Describe a test, other than using an indicator, which would show that both chemicals contain an acid group.

test

result

..... [2]

[Total: 13]

3 Three of the factors that can influence the rate of a chemical reaction are:

- physical state of the reactants
- light
- the presence of a catalyst

(a) The first recorded dust explosion was in a flour mill in Italy in 1785. Flour contains carbohydrates. Explosions are very fast exothermic reactions.

(i) Use the collision theory to explain why the reaction between the particles of flour and the oxygen in the air is very fast.

.....
 [2]

(ii) Write a word equation for this exothermic reaction.

..... [1]

The decomposition of silver(I) bromide is the basis of film photography. The equation for this decomposition is:

This reaction is photochemical.

A piece of white paper was coated with silver(I) bromide and the following experiment was carried out.

(b) Explain the results.

.....

 [3]

- (c) The fermentation of glucose is catalysed by enzymes from yeast. Yeast is added to aqueous glucose, the solution starts to bubble and becomes cloudy as more yeast cells are formed.

The reaction is exothermic.

Eventually the fermentation stops when the concentration of ethanol is about 12%.

- (i) What is an enzyme?

..... [1]

- (ii) Pasteur said that fermentation was respiration in the absence of air. Suggest a definition of *respiration*.

.....
..... [2]

- (iii) On a large scale, the reaction mixture is cooled. Suggest a reason why this is necessary.

..... [1]

- (iv) Why does the fermentation stop? Suggest **two** reasons.

.....
..... [2]

- (v) When the fermentation stops, there is a mixture of dilute aqueous ethanol and yeast. Suggest a technique which could be used to remove the cloudiness due to the yeast.

..... [1]

Name a technique which will separate the ethanol from the ethanol/water mixture.

..... [1]

[Total: 14]

4 Alkenes are unsaturated hydrocarbons. They undergo addition reactions.

(a) Two of the methods of making alkenes are cracking and the thermal decomposition of chloroalkanes.

(i) Complete an equation for the cracking of the alkane, decane.

(ii) Propene can be made by the thermal decomposition of chloropropane. Describe how chloropropane can be made from propane.

reagents propane and

conditions

[4]

(b) The following alkenes are isomers.

(i) Explain why they are isomers.

.....
.....

(ii) Give the name and structural formula of another hydrocarbon that is isomeric with the above.

name

structural formula

[4]

(c) Give the name of the product when but-1-ene reacts with each of the following.

steam

hydrogen

bromine

[3]

(d) Alkenes can polymerise.

(i) Deduce the name and structural formula of the monomer from the structure of the polymer.

name of monomer

structural formula

(ii) Draw the structure of the polymer formed from the following monomer.

[4]

- (iii)** Describe the pollution problems caused by the disposal of polymers in landfill sites and by burning.

landfill sites

.....[2]

burning

.....[1]

5 Some of the factors that can determine the rate of a reaction are concentration, temperature and light intensity.

(a) A small piece of calcium carbonate was added to an excess of hydrochloric acid. The time taken for the carbonate to react completely was measured.

The experiment was repeated at the same temperature, using pieces of calcium carbonate of the same size but with acid of a different concentration. In all the experiments an excess of acid was used.

concentration of acid / mol dm ⁻³	4	2	2
number of pieces of carbonate	1	1		
time / s	80	160

(i) Complete the table (assume the rate is proportional to both the acid concentration and the number of pieces of calcium carbonate). [3]

(ii) Explain why the reaction rate would increase if the temperature was increased.

.....
[2]

(iii) Explain why the rate of this reaction increases if the piece of carbonate is crushed to a powder.

.....[1]

(iv) Fine powders mixed with air can explode violently. Name an industrial process where there is a risk of this type of explosion.

.....
[1]

(b) Sodium chlorate(I) decomposes to form oxygen and sodium chloride. This is an example of a photochemical reaction. The rate of reaction depends on the intensity of the light.

(i) Describe how the rate of this reaction could be measured.

.....
[2]

(ii) How could you show that this reaction is photochemical?

.....
.....[1]

(c) Photosynthesis is another example of a photochemical reaction. Glucose and more complex carbohydrates are made from carbon dioxide and water.

(i) Complete the equation.

(ii) Glucose can be represented as

Draw the structure of a more complex carbohydrate that can be formed from glucose by condensation polymerisation.

[2]
