

**MARK SCHEME for the May/June 2011 question paper  
for the guidance of teachers**

**9791 CHEMISTRY**

**9791/03**

Paper 3 (Part B Written), maximum raw mark 100

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes must be read in conjunction with the question papers and the report on the examination.

- Cambridge will not enter into discussions or correspondence in connection with these mark schemes.

Cambridge is publishing the mark schemes for the May/June 2011 question papers for most IGCSE, Pre-U, GCE Advanced Level and Advanced Subsidiary Level syllabuses and some Ordinary Level syllabuses.

Page 2	Mark Scheme: Teachers' version	Syllabus	Paper
	Pre-U – May/June 2011	9791	03

Question Number	Expected Answer	Max Marks	Rationale
1 (a) (i)	If the conditions of an <u>equilibrium</u> are changed then the system will adjust in such a manner as to <u>oppose the change</u>	1	<b>ALLOW</b> alternatives for 'oppose' e.g. 'minimise', 'counteract'
1 (a) (ii)	$K_p = \frac{p_{\text{NO}}^2}{p_{\text{N}_2} \times p_{\text{O}_2}}$	2	1 mark if no 'squared' or if square brackets used
1 (a) (iii)	$K_p$ increases with increasing T Increasing T favours endothermic reaction <b>OR</b> inc T favours forward reaction <b>OR</b> inc T favours NO production (so forward reaction must be endothermic)	1 1	
1 (a) (iv)	No change in equilibrium position Equal number of moles of gas on each side	1 1	
1 (b) (i)	$T_2$ curve must have its peak to the <u>right</u> and <u>lower</u> than $T_1$ $T_2$ curve must <u>start at '0,0'</u> <u>only cross <math>T_1</math> once</u> and <u>not touch <math>T_1</math> curve</u> at RHS <i>Number of molecules</i> labelled on vertical axis <i>Energy</i> labelled on horizontal axis	1 1 1 1	<b>IGNORE</b> 'kinetic'
1 (b) (ii)	Labelled $E_a$ on horizontal axis with line up to top curve <b>AND</b> reference to greater area under curve above $E_a$ for $T_2$ curve More molecules with $E > E_a$ at higher T Greater proportion of collisions successful	1 1 1	
<b>Total</b>		<b>[14]</b>	

Page 3	Mark Scheme: Teachers' version	Syllabus	Paper
	Pre-U – May/June 2011	9791	03

Question Number	Expected Answer	Max Marks	Rationale
2 (a)	$V\alpha T$ or $V/T = \text{Constant}$	1	<b>ALLOW</b> $V_1/T_1 = V_2/T_2$
2 (b) (i)	Forces of <u>attraction</u> and <u>repulsion</u> between particles <b>OR</b> <u>intermolecular</u> forces Particles have volume	1 1	Both needed if just 'forces' 'Particle' owtte must be seen at least once
2 (b) (ii)	$V = nRT/p = \frac{1 \times 8.31 \times 273}{1 \times 10^5} = 0.0227 \text{ m}^3 = 22.7 \text{ (dm}^3)$ (1) (1)	2	
2 (b) (iii)	At high pressures the molecular size <b>OR</b> the forces of <u>repulsion</u> become increasingly significant Increase in pressure is accompanied by a <u>less than ideal decrease in volume</u>	1 1	
2 (b) (iv)	Volume effect is <u>greater the bigger</u> the particles	1	<b>DO NOT ALLOW</b> 'mass'
2 (c)	Intermolecular forces of <u>attraction</u> (are significant when KE of molecules is relatively low hence) Increase in pressure causes <u>greater than ideal</u> decrease in volume	1 1	
<b>Total</b>		<b>[10]</b>	

Page 4	Mark Scheme: Teachers' version	Syllabus	Paper
	Pre-U – May/June 2011	9791	03

Question Number	Expected Answer	Max Mark	Rationale
3 (a)	A: Electrons B: Protons/Hydrogen ions/H <sup>+</sup>	1 1	
3 (b)	platinum (palladium/nickel/metal hydrides)	1	
3 (c)	Cathode: $O_2 + 4H^+ + 4e^- \rightarrow 2H_2O$ Anode: $H_2 \rightarrow 2H^+ + 2e^-$	1 1	<b>ALLOW</b> one mark if correct equations but wrong way round <b>ALLOW</b> 'multiples'
3 (d) (i)	Any two from: <ul style="list-style-type: none"> <li>eliminates/reduces greenhouse gases if hydrogen comes from electrolysis of water</li> <li>have higher efficiency (than diesel or gas engines)</li> <li>much quieter operation (than internal combustion engines)</li> <li>maintenance simple/few moving parts</li> </ul>	Max 2	Advantages must relate directly to context of use in motor vehicles
3 (d) (ii)	Any two from: <ul style="list-style-type: none"> <li>reforming is technically challenging and not environmentally friendly</li> <li>'refuelling' and starting times are longer</li> <li>driving range of cars is shorter</li> <li>fuel cells generally bigger/heavier than comparable batteries or engines</li> </ul>	Max 2	Disadvantages must relate directly to context of use in motor vehicles

Page 5	Mark Scheme: Teachers' version	Syllabus	Paper
	Pre-U – May/June 2011	9791	03

Question Number	Expected Answer	Max Mark	Rationale
3 (e) (i)	Zn(s) Zn <sup>2+</sup> (aq)	1	State symbols required
3 (e) (ii)	being oxidised = Zn being reduced = Ag <sub>2</sub> O (or Ag <u>in the Ag<sub>2</sub>O</u> )	1 1	<b>DO NOT ALLOW</b> Ag <sup>+</sup>
3 (e) (iii)	Zn + Ag <sub>2</sub> O + H <sub>2</sub> O → Zn <sup>2+</sup> + 2OH <sup>-</sup> + 2Ag	1	<b>ALLOW</b> Zn(OH) <sub>2</sub> state symbols NOT required
3 (e) (iv)	+0.34 – (–0.76) = +1.10 V	1	
3 (e) (v)	$\Delta G = -nFE = -2 \times 96.5 \times 1.10 = -212(.30) \text{ kJmol}^{-1}$	1	<b>ALLOW</b> ecf from 3(e)(iv)
3 (e) (vi)	$\Delta G = -RT \ln K$ $-212300 = -8.31 \times 298 \times \ln K$ $\ln K = 212300 / (8.31 \times 298) = 85.73$ $K = e^{85.73} = 1.7(1) \times 10^{37}$	1 1	<b>ALLOW</b> ecf from 3(e)(v)
<b>Total</b>		<b>[17]</b>	

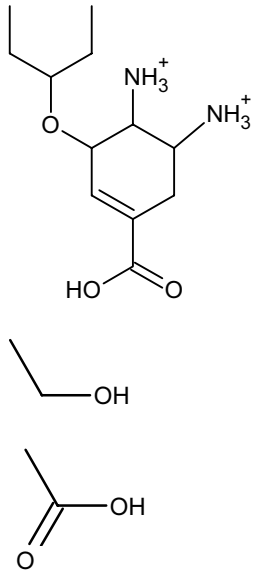

Page 6	Mark Scheme: Teachers' version	Syllabus	Paper
	Pre-U – May/June 2011	9791	03

Question Number	Expected Answer	Max Marks	Rationale
4 (a)	12	1	
4 (b)	HCP = ABA(B) FCC/CCP = ABC(ABC)	1 + 1 1 + 1	<b>ALLOW</b> 'hexagonal' <b>ALLOW</b> 'cubic' Names are 'free-standing'; layers marks depend on names
4 (c) (i)	octahedral	1	
4 (c) (ii)	calcium; fluoride/fluorine; tetrahedral	1 1	calcium <b>AND</b> fluoride/fluorine both needed for first mark
4 (d) (i)	(Good agreement indicates a) high level of ionic character/low level of covalency in the ionic halides As electronegativities of Na and X are very different	1 1	
4 (d) (ii)	Difference increases from AgF to AgI with decreasing difference in electronegativity so least covalency in AgF/greatest covalency in AgI as small anion least easily polarised/large anion most easily polarised	1 1 1	

<b>Page 7</b>	<b>Mark Scheme: Teachers' version</b>	<b>Syllabus</b>	<b>Paper</b>
	<b>Pre-U – May/June 2011</b>	<b>9791</b>	<b>03</b>

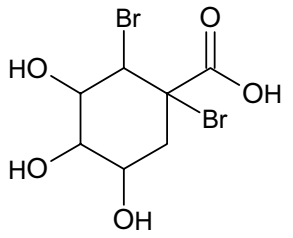

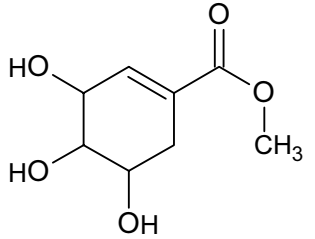

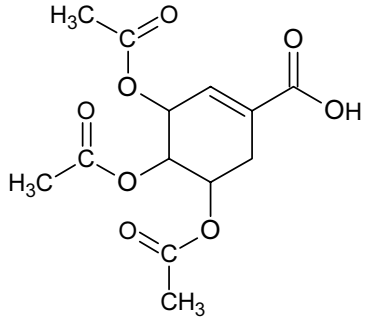

Question Number	Expected Answer	Max Marks	Rationale
<b>4 (e) (i)</b>	haemoglobin	1	
<b>4 (e) (ii)</b>	(apo)Ferritin binds to Fe(II) and stores it as Fe(III) so it stores/controls release of iron	1 1	
<b>4 (f)</b>	(negative $E^\ominus$ in) 4.1 (indicates) equilibrium lies further left (than in 4.2)/tendency to produce electrons greater/ $\text{Fe}(\text{OH})_2$ stronger reducing agent In acid conditions $[\text{OH}^-]$ falls so equilibrium moves right/ tendency to produce electrons falls. $\text{Fe}(\text{OH})_2$ reducing power falls So Fe(II) stabilised wrt Fe(III)/chance of Fe(II) oxidation reduced	1 1 1	ora
<b>Total</b>		<b>[19]</b>	

Page 8	Mark Scheme: Teachers' version	Syllabus	Paper
	Pre-U – May/June 2011	9791	03

Question Number	Expected Answer	Max Marks	Rationale
5 (a)	Carbon 1 = Alcohol Level Carbon 2 = Carboxylic Acid Level	1 1	
5 (b)	Hydrolysis Functional Group Level (of Carbons 3 and 4) is the same	1 1	
5 (c)		2  1  1	<p><b>ALLOW</b> <math>\text{-NH}_2</math> in place of both <math>\text{-NH}_3^+</math> groups for 1 mark in first structure</p> <p><b>ALLOW</b> one <math>\text{-OH}</math> (from amide link) and one <math>\text{-NH}_3^+</math> for 1 mark in first structure</p>
5 (d)	$\text{C}_7\text{H}_{10}\text{O}_5$	1	

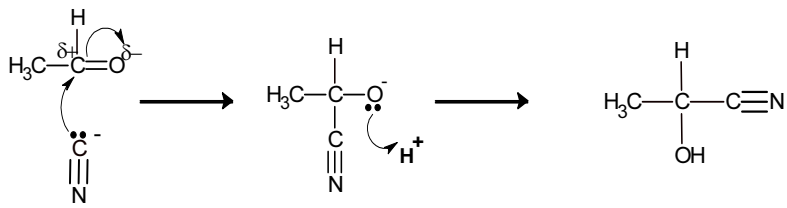

Page 9	Mark Scheme: Teachers' version	Syllabus	Paper
	Pre-U – May/June 2011	9791	03

Question Number	Expected Answer	Max Marks	Rationale
5 (e) (i)		1	
5 (e) (ii)		1	
5 (e) (iii)		2	<p><b>ALLOW</b> 1 mark if only one or two acyl groups attached</p> <p><b>ALLOW</b> 1 mark if <math>\text{-COOH}</math> acylated <u>as well as</u> all 3 <math>\text{-OH}</math> groups</p>
5 (f)	From left to right: 1; 2 and 7; 4; 5 and 6; 3	3	4 = 3; 2 = 2; 1 = 1
5 (g) (i)	Electrophilic Addition	1	both needed

Page 11	Mark Scheme: Teachers' version	Syllabus	Paper
	Pre-U – May/June 2011	9791	03

Question Number	Expected Answer	Max Marks	Rationale
6 (a)	Nucleophilic Addition	1	both needed
6 (b) (i)	 <p>lone pair, - charge and curly arrow on C in CN polarity of C=O curly arrow from C=O to delta -ve O lone pair on O<sup>-</sup> and curly arrow to H<sup>+</sup></p>	1 1 1 1	<b>ALLOW</b> H-OSO <sub>3</sub> H or H-OH for H <sup>+</sup>
6 (b) (ii)	(product is a) racemate / <u>equimolar</u> mix of enantiomers	1	
6 (c) (i)	$K_a = \frac{[\text{CH}_3\text{COO}^-][\text{H}^+]}{[\text{CH}_3\text{COOH}]}$	1	
6 (c) (ii)	$\text{p}K_a = -\log K_a$	1	
6 (c) (iii)	<p>decreasing <math>\text{p}K_a</math> means increasing acid strength</p> <p><u>increasing</u> electron-withdrawing character from <math>-\text{CH}_2\text{Cl}</math> (to <math>-\text{CHCl}_2</math>) to <math>-\text{CCl}_3</math></p> <p>reduces charge density on <math>\text{COO}^-</math> <b>OR</b> stabilises anion <b>OR</b> weakens O-H bond</p> <p>so moves equilibrium to right/increases dissociation</p>	1 1 1 1	<b>ALLOW</b> pattern identification by reference to number of chlorines  <b>DO NOT ALLOW</b> 'easier' for 4 <sup>th</sup> mark

<b>Page 12</b>	<b>Mark Scheme: Teachers' version</b>	<b>Syllabus</b>	<b>Paper</b>
	<b>Pre-U – May/June 2011</b>	<b>9791</b>	<b>03</b>

Question Number	Expected Answer	Max Marks	Rationale
<b>6 (d) (i)</b>	non-superimposable mirror images	1	
<b>6 (d) (ii)</b>	higher <u>atomic number</u> = higher priority 'view' chiral centre from opposite lowest priority group <b>OR</b> reference to moving –H to the back R = clockwise order of priority (high to low) of remaining groups	1 1 1	<b>DO NOT ALLOW</b> reference to 'atomic mass' or 'size'
<b>6 (d) (iii)</b>	The <u>rotation of plane-polarised light</u>	1	
<b>6 (d) (iv)</b>	+/- notation + = clockwise / - = anticlockwise	1 1	
<b>Total</b>		<b>[19]</b>
